50X1-HUM

1. Location of the Object

The station is located southeast of Hradec Kralove (Königgrätz) on a road branching off in southwesterly direction from the Königgrätz - Svitavy highway approximately 20 km out of Königgrätz. The distance from the bifurcation to the station is 5 km.

2. Description of the Object

a. On the right side of the road, there are four about 30-m high steel masts within an area 1 square km large and surrounded by a 2.5-m high barbed wire fence. The masts are set up square and the distance between them is about 80 m (rough estimate). Quadrangular in cross section and tapering towards the top, they resemble slender power-line masts. No devices are fixed on their upper ends. Wires with "spaced oval-shaped balls" are strung from the mast tops to about 1.5-m high trestles. The upper part of the entire installation looks approximately like the Fix Eight direction finder, the horizontal wiring between the masts, however, being strung at about two thirds of the latters' height. On the ground, there are about 1.5-m high trestles bearing wires spanned like a net. Two of the four masts are erected along the road at a distance of about 150 m (the distance between the barbed wire fence and the road is about 5 to 7 m). A quadrangular wooden hut is located in between the two masts along the road.

b. On the left side of the road, opposite the installation described above, another two masts are located at a distance of about 800 to 1,000 m. The masts are erected in a depression. Because of the great distance, no details could be observed. An overhead connection to the installation described under 2.a. could not be determined. Neither persons nor vehicles were seen.
